Installshield Custom Action Condition Uninstall Java

>> > >> >I want to set things up so that custom action 'foo-install-CA' is run if >> and >> >only if during this install >> >feature foo is being installed (either as a modify or as a product >> install), >> >and >> >that custom action 'foo-remove-CA' is run if and only if during this >> install >> >feature foo is being UNinstalled (either as a modify or as a product >> >REMOVE).. I think this is a very common requirement Is there a 'standard' way to do this, if not how do I hack this to happen? Use the condition &FeatureName = 3 on install and &FeatureName = 2 on uninstall for your custom actions.

I want to set things up so that custom action 'foo-install-CA' is run if and only if during this install feature foo is being installed (either as a modify or as a product install), and that custom action 'foo-remove-CA' is run if and only if during this install feature foo is being UNinstalled (either as a modify or as a product REMOVE). 0@news installshield com Installshield Uninstall Old Version> Use the condition &FeatureName = 3 on install > > and &FeatureName = 2 on uninstall for your custom actions.. > >I want to associate custom actions with features, and run them after > >everything else is installed.. >> >I want to associate custom actions with features, and run them after >> >everything else is installed.. If it does not, the condition would be (!Feature name = 2) And REINSTALL -- David Thornley Lead Developer Support Engineer InstallShield Software Corporation Peter Atkinson wrote in message.. What about when a feature is being reinstalled? David Thornley wrote in message news:3804c237.. Does this not work on reinstall? I would ask that you run it through a test real quick and let me know.. > >I think this is a very common requirement Is there a 'standard' way to do >this, >if not how do I hack this to happen? > >Kees > > > >.. > >I want to set things up so that custom action 'foo-install-CA' is run if and >only if during this install >feature foo is being installed (either as a modify or as a product install), >and >that custom action 'foo-remove-CA' is run if and only if during this install >feature foo is being UNinstalled (either as a modify or as a product >REMOVE).. > > -- > David Thornley > Lead Developer Support Engineer > InstallShield Software Corporation > > > > > Kees van den Doel wrote in message.. >I want to associate custom actions with features, and run them after >everything else is installed. 773a7aa168 [Unity Build For Mac](#)
